

Islip, NY – Islip Town Supervisor Phil Nolan, as well as Councilman Steve Flotteron, was on hand for the grand opening of Long Island Thermography in Brightwaters.

Long Island Thermography consists of doctors and certified technicians whose mission it is to detect and eliminate breast cancer in its earliest stages through noninvasive state of the art infrared imaging. Studies have shown that when thermography has been added to breast health checkups, the survival rate of patients has increased by 61%, and 95% of early-stage cancers can be detected.

“Too many members of our community have been affected by breast cancer,” said Supervisor Nolan. “Long Island Thermography is another great option in the fight against this terrible disease.”
